ADVENTUROUS PORTFOLIO

Aim - The portfolio looks to deliver above inflation return (capital growth) through a combination of fixed interest, equity and property investments, but with a higher weighting to equities.

Key points - The portfolio has a higher content of equity exposure compared to all the other portfolios we offer. Currently the portfolio holds approximately 13% in diversifying assets which includes property and infrastructure, with the balance in equity funds. We believe this is the best way to provide potential upside growth with a much higher level of risk, however there is less protection against downside risk.

Asset allocation – the portfolio will diversify your assets between funds offering exposure to different sectors of the market and regions. Creating the right mix of assets is an important part of the process of building a portfolio designed to meet your financial objectives. Your portfolio is monitored and reviewed on an ongoing basis to ensure that it remains in line with your risk profile.

| | 2021/2022 Asset Allocation |
|--|---------------------------------------|
| Diversified Assets | 12.00% |
| Equities | |
| Europe including UK | 18.00% |
| US | 14.00% |
| General Global | 27.00% |
| Emerging Markets and Asia Including Japan and China | 29.00% |
| | 100.00% |

Risk - The table below shows the potential volatility (rapid or unpredictable changes, especially for the worse, in the portfolio value at any given point in time) of the proposed holdings based on past performance. For example, over 15 years, the proposed holdings returned 13.03% p.a., the volatility on the upside and downside was 14.14%. This means at any point in time the average maximum downside was -1.11%, and upside 27.17%. These are purely a guide and are not guaranteed. The actual figures could be higher or lower at any single point in time.

| | Return | Volatility |
|----------|---------------|-------------------|
| 1 Year | 54.07% | 12.89% |
| 3 Years | 18.49% | 14.74% |
| 5 Years | 20.43% | 12.48% |
| 10 Years | 16.01% | 11.83% |
| 15 Years | 13.03% | 14.14% |

We aim to deliver positive returns over the medium to long term with volatility similar to the FTSE World Index. **Both returns and volatility are not guaranteed but act as a guide.**

You should also consider specific risks such as inflationary risk, counterparty risk and risks arising from a lack of diversification.

Market shocks - The table below takes six past market shocks and shows how the holdings **in the portfolio as at 1 July 2021** would have performed both in the year of and after the event. This reflects the fund charges but does not account for any product charges or advice fees.

| Black Monday | | September 11 | | WorldCom Bankruptcy | |
|------------------------|--------|-----------------|---------|---------------------|--------|
| 1987 | 1988 | 2001 | 2002 | 2002 | 2003 |
| -20.72% | 21.11% | -24.26% | -29.90% | -29.90% | 42.00% |
| | | | | | |
| Global Economic Crisis | | Eurozone Crisis | | Brexit | |
| 2008 | 2009 | 2011 | 2012 | 2016 | 2017 |
| -28.54% | 41.67% | -6.00% | 16.93% | 20.13% | 28.78% |

Putting this in context, the table below shows what £150,000 invested on 1 January 2008 would have been worth each December from 2008 to 2012 (including all fees and charges) based on the proposed portfolio:

| | % return (cumulative) | Monetary Amount (£) |
|------------------|-----------------------|---------------------|
| 31 December 2008 | -29.94% | £105,090.00 |
| 31 December 2009 | -1.72%% | £147,409.00 |
| 31 December 2010 | 26.46% | £189,700.00 |
| 31 December 2011 | 17.11% | £175,662.00 |
| 31 December 2012 | 35.29% | £202,942.00 |

The average return after charges from 1 January 2008 to 31 December 2012 was 7.05% p.a.; this reflects two down periods in 2008 and 2011.

Time period return: The table below shows the best and worst returns over 3 months, 1 year and 3 years:

| | Best (%) | Worst (%) |
|----------|----------------------|----------------------|
| 3 months | 25.56 (04/20-06/20) | -13.38 (01/20-03/20) |
| 1 year | 54.07 (04/20 -03/21) | -4.64 (01/18-12/18) |
| 3 years | 23.11 (10/15-09/18) | 7.57 (04/17-03/20) |

Loss of capital - The portfolio is positioned as a long-term investment (5 years plus). The aim is to achieve a positive outcome over the investment period, although past performance is no guide to future performance and investments can fall as well as rise.

The table above highlights that there will be movements in the value of the investment (both positive and negative) during this time frame. The figures do not reflect any withdrawals or additional investments.

There is the potential for capital loss, particularly where the investment is encashed during a down period (in this example 2008). Even encashing on 31 December 2011 would have achieved a positive return on the initial investment.

SPECIAL NOTE: You should note that the holdings can and do change; the figures shown above are illustrative only and are not a guarantee of what might happen in the future. They aim to demonstrate the potential risks and volatility based on five past market shocks, with no prediction of future events.

ADVENTUROUS PORTFOLIO PERFORMANCE

The Portfolio was launched on 1 January 2009 and the total return up to 30 September 2021 was 334.18% (12.21% p.a.) against a benchmark return of 182.00% (8.47% p.a.).

Portfolio vs Benchmark – 1 January 2009 – 30 September 2021

| Investment Name | Value |
|--|--|
| LWM Adventurous Portfolio (T... 334.18 | Benchmark ETF - Adventuro... 182 |
| UK RPI (Market Return, GBP, ... 44.39 | IA Flexible Investment (Total ... 183.54 |
| | UK Savings 2500+ Invt NR (... 1.91 |

| | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | Since launch |
|------------------------------|--------|--------|--------|--------|--------|-------|--------------|
| Adventurous Portfolio | 19.64% | 21.89% | -7.99% | 21.15% | 16.62% | 7.07% | 12.21% p.a. |
| Benchmark | 20.01% | 12.85% | -5.99% | 18.02% | 9.40% | 8.52% | 8.47% p.a. |

| | 1 Year to 30/09/17 | 1 Year to 30/09/18 | 1 Year to 30/09/19 | 1 Year to 30/09/20 | 1 Year to 30/09/21 |
|------------------------------|--------------------|--------------------|--------------------|--------------------|--------------------|
| Adventurous Portfolio | 20.38% | 10.48% | -0.95% | 10.33% | 20.88% |
| Benchmark | 12.82% | 7.43% | 4.16% | 3.08% | 18.95% |

Note: RPI is a measure of inflation; for example, in 2020 the Portfolio returned 16.02% after inflation. Cash is a means of demonstrating an upward curve with no stock market volatility.

BENCHMARKS: The key measure for us is to outperform a fund that tracks an index over the medium to long term. Within each sector, we will have funds that perform differently. We have set a benchmark which accurately and fairly reflects what we are aiming to do. The benchmark is tradeable and therefore can be invested in.

SPECIAL NOTE: You should note that past performance is not a reliable indicator of future returns and the value of your investments can fall as well as rise. The total return reflects performance without platform charges and adviser fees or the effects of taxation, but is adjusted to reflect all on-going fund expenses and assumes reinvestment of dividends and capital gains. If adjusted for platform charges, adviser fees and the effects of taxation, the performance quoted would be reduced.
