Diversification Benefit

Current Portfolio Risk Score

87

Weighted Risk Score of Holdings

125

Diversification Benefit

30%

As a portfolio's risk increases, a high diversification benefit becomes more difficult to achieve as the portfolio necessarily becomes concentrated in higher risk and higher correlated investments.

What may be considered high or low diversification benefits are therefore dependent on the overall portfolio risk.

LWM Balanced Positive Impact Portfolio - Aug 14

Portfolio Summary

The following tables and charts illustrate the overall performance of the portfolio against its benchmark. The cumulative chart illustrates the overall performance over a maximum of five years dependant on the age of the portfolio and the table shows the overall performance broken down into specified periods. The discrete table and chart illustrates how the portfolio has performed against the benchmark during whole calendar years. All performance is to the latest month end and in GBP.

LWM Balanced Positive Impact Portfolio - Aug 14 Ratio Analysis (3 yrs)

Volatility

Standard deviation is a statistical measurement which, when applied to an investment fund, expresses its volatility, or risk. It shows how widely a range of returns varied from the fund's average return over a particular period.

Alpha

Alpha is a measure of a fund's over- or under-performance by comparison to its benchmark. It represents the return of the fund when the benchmark is assumed to have a return of zero, and thus indicates the extra value that the manager's activities have contributed.

Beta

Beta is a statistical estimate of a fund's volatility by comparison to that of its benchmark, i.e. how sensitive the fund is to movements in the section of the market that comprises the benchmark.

Downside Capture

Downside Capture Ratio measures a manager's performance in down markets relative to the market (benchmark) itself. It is calculated by taking the security's downside capture return and dividing it by the benchmark's downside capture return.

Upside Capture

Upside Capture Ratio measures a manager's performance in up markets relative to the market (benchmark) itself. It is calculated by taking the security's upside capture return and dividing it by the benchmark's upside capture return.

LWM Balanced Positive Impact Portfolio - Aug 14

Risk & Return (3 yrs)

The scatter chart and table illustrate the risk, represented by volatility, of your portfolio holdings, the portfolio itself and its benchmark against return, represented by performance. The chart will return performance and volatility over three years to latest month end and in GBP.

[^]Portfolio Expense - The portfolio expense is calculated using the weighted value of the Ongoing Costs Ex Ante of the portfolio constituents. Where the Ongoing Costs Ex Ante is not available the OCF is used, and where this is not available the TER is used. If an underlying instrument has no Ongoing Costs Ex Ante or OCF or TER figure, the portfolio expense cannot be calculated.

LWM Balanced Positive Impact Portfolio - Aug 14 ESG Rating Analysis

Climetrics Fund Rating

The Climetrics scoring system is based on three quantitative layers of analysis. These are each fund's portfolio holdings, its investment policy, and the asset manager's governance of climate issues. This results in an overall score for each fund, which is compared to all scored funds and then assigned a final 1-5 leaf rating.

At the portfolio holdings level, the Climetrics rating uses a bespoke methodology to score companies' performance. This is done across three interrelated themes: reducing GHG emissions, managing water resources and tackling deforestation.

A top rating indicates that, on average, the companies in a fund's portfolio are better at disclosing and managing material climate, water and deforestation issues, compared to those in lower rated funds. Top-rated funds better support the low-carbon transition.

ISS ESG Fund Rating Stars

The fund's overall star rating is based on the fund's relative performance in comparison to peer funds in the same Lipper Global Classification class. The rating is derived from a weighted average ESG Performance Score which evaluates issuers across environmental, social, and governance performance metrics. The overall rating is graded on a scale from 1 (worst) to 5 (best).
